# LARGE PATIENT CARE

**Bariatric Bed**

*Danny Dvorak, RN, places a bolster to expand the width of the large patient bed. The patient grasps the overhead tripod as an aid in sitting up.*

**What Is It?** Hill-Rom Tri-Flex II Bariatric Bed

**Year Acquired:** 2014

**Use:** In medical terms, bariatric means weight. Bariatric beds are comfortable and supportive for hospital patients who are large.

**How It Works:** The bariatric bed has a 1,000 pound capability and expands to 48 inches in width. A built-in drive motor allows a nurse to raise or lower the bed and transport the patient on the bed from place to place with a minimum of effort.

An overhead tripod aids the patient in sitting up. The side and foot rails drop down to make getting in and out of bed easier.
